

Emission Statement:

“Stair Lock is the first and only stair manufacturer in Australia whose product has been awarded the internationally recognised Good Environmental Choice Certification, attracting precious Green Star Credits. Stair Lock is the first in Australia to use EO-MDF exclusively, which has exceptionally low toxic emission levels, particularly of formaldehyde, an unfortunate attribute of lower grade imported timber panel products - plywood, particleboard and fibreboard - posing potential carcinogenic danger to manufacturers, builders and end users.” Greg Lloyd, CEO

Furniture & Fittings

www.goodenvironmentalchoice.org.au

Stair Lock is environmentally innovative from a full life cycle perspective - using material fibre from plantation forests and sawmill residue, saving greenhouse gas emissions and precious resource. And the good news is that the switch to **EO-MDF** doesn't increase the cost of Stair Lock's stairs, so their competitive low prices remain the same.

Stairways requiring moisture resistant installation are made using MR EO-MDF, a **GREENfirst** initiative from The Laminex Group.
