

Outstanding Value!

The low cost alternative to solid timber stairs.

Builders and home owners have been quick to realise the remarkable value of Stair Lock timber stairs. Using a thick 4mm Red Oak laminate surface layer over a solid EO-MDF substrate that can be re-sanded and re-polished up to 3-5 times, Stair Lock have created a timber stair at a very competitive cost. American Red Oak is America's favourite architectural timber for building interiors because it has many advantages, including being able to be stained without huge colour variations.

When combined with our popular metal balustrade, Stair Lock American Oak stairs are an unbeatable package.
